

Arace Supply - Electrical Metallic Tubing (EMT)

Application:

Our EMT (Electrical Metallic Tubing) is crafted from high-quality, flat-rolled steel, formulated for superior malleability and durability. After forming and welding, each tube receives a satin-smooth, corrosion-resistant zinc coating through our advanced galvanizing process, ensuring long-lasting protection in both dry and wet locations. Designed for easy installation, our EMT features proprietary markings that aid in precise measurements and reduce errors, making it a cost-effective solution for protecting and routing electrical wiring in residential and commercial applications. With its smooth interior surface, our EMT ensures effortless wire pulling, providing reliability and efficiency for all your electrical conduit needs.

Standards:

- UL Listed
- Complies to UL 797
- Complies to ANSI C80.3
- Complies to NEC Article 358
- Complies to WW-C-563
